

Tumble Dryers

TD Series

Drying surely plays a fundamental role in a laundry process : this in fact determines the final result, linen must come out in perfect condition, both as regards the form and the tissue.

Dryers AQUASTAR of the TD series have been designed with the maximum care.

Reduction in drying time results into energy and costs savings and longer life of the dryer itself.

Through the use of direct transmission without belts and coupled to an inverter controlled by a potentiometer placed on the control panel, you can adjust the drum speed according to the linen or the clothes to dry.

All dryers belonging to the TD series are equipped with a microprocessor with 10 preset and 1 adjustable programs.

The care and quality of fabrics is ensured by a system of temperature control, it is also available as option the control for residual humidity, very useful for the Wet Cleaning system.

- Very heavy duty
- Direct drive with Inverter
- Without transmission belt
- Reverse action standard
- Easy access to the lint filter
- Powder coated body and panels
- Stainless steel drum
- User-friendly control
- Air Filter easy to clean
- Heavy duty stainless steel filter starting at 40 kg
- Large door opening
- Electric, Steam or Gas heated

AQUASTAR

Low Speed Washer Extractor

NS Series

The Low Speed Washer Extractors AQUASTAR of the NS series, incorporate an electronic microprocessor with 16 washing programs and easy maintenance.

Are in stainless steel construction and are available in 10, 13, 18 and 25 Kg of capacity.

All the NS machines, have a big loading door, or an easy loading and unloading for an optimal utilize also in the Coin-Up laundry.

- Extraction speed 500 rpm
- Microprocessor control
- 16 preset washing program
- Digital Display
- Safety looking system
- Electric or Steam Heating
- Alarm control
- Front load washers
- Stainless steel construction AISI 304
- Large loading door
- User-friendly control

Model	Capacity	Energy Supply	Extraction Speed	G Force	Noise Level	Dimensions L, W, H mm	Net Weight Kg
NS 10	Kg. 10	Kw. 6	500 rpm	75	65 Db	692 x 805 x 1155	178
NS 13	Kg. 13	Kw. 9	500 rpm	87	65 Db	788 x 870 x 1300	210
NS 18	Kg. 18	Kw. 12	475 rpm	87	65 Db	884 x 914 x 1404	290
NS 25	Kg. 25	Kw. 18	450 rpm	87	65 Db	980 x 972 x 1447	450

High Speed Washer Extractor

WED Series

WED series offers a wide range of high-speed washers, designed and built with the most recent technologies, which permitted to create a series of machines to minimize the consumption of water, electricity and detergents.

Furthermore, thanks to the system adopted by the series WED, it is now possible to wash even the most delicate garments which until now could only be dry-cleaned.

The water washing system simulates the traditional hand washing, soaking and stain removal, giving greater importance to the chemical action but eliminating the risks involved in handling chemical products, since in this case the products are not toxic.

With this new type of washing system, besides the reduced consumption of water, energy and detergents we also get major benefits in the process of drying and ironing the treated garments.

The series WED is fitted with a big loading door and with the innovative electronic programmer "MP": this permits - by a connection to an external computer or directly on the machine itself - to program up to 100 different washing programs.

- Perfectly adapted for: medium dry-cleaning shops, Health care, Hospitals, Commercial laundries
- Microprocessor control
- 16 Preset washing program
- 84 Free programmable
- Digital Display for washing steps
- Free standing
- Safety door lock
- Electric or Steam Heating
- Alarm Display
- Front Loading charge
- Large loading door
- Vat, body, drum in stainless steel
- Voltage V. 400/50/3+N+T
- Electronic frequency drive motor

WED 10 - 13 - 18 - 25

WED 40 - 60 - 120

Model	Capacity	Energy Supply	Extraction Speed	G Force	Noise Level	Dimensions L, W, H mm	Net Weight Kg
WED 10	Kg. 10	Kw. 6,75	1000 rpm	300	60 Db	692 x 805 x 1155	208
WED 13	Kg. 13	Kw. 10	1000 rpm	350	60 Db	788 x 870 x 1300	250
WED 18	Kg. 18	Kw. 14,2	950 rpm	350	60 Db	884 x 914 x 1404	340
WED 25	Kg. 25	Kw. 21	900 rpm	350	70 Db	980 x 1040 x 1565	500
WED 40	Kg. 40	Kw. 31,5	820 rpm	350	75 Db	1310 x 1325 x 1660	1350
WED 60	Kg. 60	Kw. 47	770 rpm	350	75 Db	1430 x 1425 x 1800	1600
WED 120	Kg. 120	-----	770 rpm	350	75 Db	1780 x 1715 x 2250	3300

Pass Thru Washer Extractor

ASEP Series

There are many potential sources of microbiological contamination in Hospitals, Nursing homes, correctional facilities, as bacteria's are easily spread unless very strict controls are place. Optimal sanitation is ensured by a dual door design separated by a sanitized partition. Disinfected laundry never comes in contact with soiled contaminated laundry.

Today the RABC (Risk Analysis and Bio contamination Control) standard brings the only logical solution to an efficient separation of clean and soiled linen, this standard avoid the risk of recontamination or cross contamination.

It has been recognized that the AQUASTAR ASEP Barrier Washer machines Series, reduce the risk of spreading nosocomial infections (hospital-acquired infections) during laundering.

With AQUASTAR Barrier Washer Machine designed with a durability factor in mind, you will get an ergonomic heavy duty machine requiring little maintenance.

You will get excellent mechanical action, and maximum flexibility (thanks to our control). Water consumption (and energy consumption to heat the water) will be low because of the small space between the inner and outer drum.

On the other and, AQUASTAR are compact, easy to install, and as the panels are removable you will have easy access to components.

- Perfectly adapted for: Hospitals, Nursing Home
- Microprocessor control
- 5 Preset Washing program
- 25 Free programmable
- Digital Display
- Safety door lock mechanism
- Electric, Steam or Gaz Heating system
- Alarm Display
- Opposite door for loading and unloading
- Very large loading door
- Vat, body, drum in stainless steel
- Electronic Frequency drive motor
